

Welcome Message from our President

I would like to thank you for taking the journey with us to discover new solutions for next generation healthcare. My career in biomedical services includes CryoLife, one of the world's leading medical technology companies that developed a decellularization technology to preserve human tissue for cardiac and vascular surgeries, known as the SynerGraft™ process. CryoLife completed its IPO in February 1993 (NYSE: CRY).

Despite my experience in the biomedical field, I struggled to provide meaningful help to our 19-year-old son, J. Bradley Allen, who became addicted to OxyContin, and later, Suboxone after a car accident. Tragically, Bradley died of an overdose in January 2014.

We started JBA Health to help other families avoid the pain and suffering we endured when a loved one has an opioid related addiction.

If you have been treating the pain associated with opioid withdrawal using the same limited tool set – medications for opioid use disorder or basic comfort meds; we believe the time has come to add a less complicated, drug free, non-addictive approach with an FDA cleared, prescription based wearable electrical nerve stimulation device.

At JBA Health, we selected the Sparrow Ascent device in consideration of their clinical trial data which has shown that it provides significant opioid withdrawal symptom relief in as little as 30 minutes. The device delivers personally tailored mild electrical signals attached to the skin (no needles) around the patient's ear. The electrical signals target specific nerves that activate areas of the brain that release endorphins, which then fill the empty opioid receptors and aid in the reduction of pain associated with opioid withdrawal symptoms. Typically, the device is worn at home or work for a time period prescribed by their physician which allows the patient to continue their daily schedule.

I encourage you to learn more about this revolutionary electrical nerve stimulation technology by scheduling a 30-minute demo via our Contact Us form.

Ahead, we look forward to introducing other solutions for next generation healthcare technologies, including Acute and Chronic Non-Opioid Pain Management, Regenerative Medicine, and AI Assisted Healthcare.

Wishing you a healthy and happy long life.

Yours truly,

L. Michelle Allen
